Make a “Stand-Alone” Bibliography
by David J. Bertuca, Associate Librarian / dbertuca@buffalo.edu

The following shows how to create a stand-alone bibliography from your EndNote library.

Click on **Tools**, then select **Sort Library**

Choose Author Title Year as shown below. Click OK. This creates the way records will sort in your bibliography.

Select the **output style** that you want. If the one you want is not shown, click on **Select Another**
Style and choose one from the list.

Do a Select All to include the records that you want in your bibliography. Or select just the ones you want. You may wish to set up a Group, or search for specific records to include in the bibliography.
Pull down **Edit**; select **Copy Formatted**

Then open a word processing file (Word, WP or other).

Paste data and then you can format this as you would anything else.

You can also edit your **output style** to include **Abstracts** or other fields into your bibliography.
